

Better control and avoidance of disease in oilseed rape

Protect yield and quality • Maximise effectiveness of control
Save on product, time and applications

Designed for:

Individuals who wish to improve the success of oilseed rape crop production through better disease control

Entry requirement:

An intermediate course best suited to those who are **able** to demonstrate some practical experience

Price:

£120 + VAT

Duration:

A half day classroom-based course

CPD points:

CPD points to be awarded

Learning outcomes:

At the end of this course you will be able to:

- Define the key components of yield formation and appreciate how diseases affect yield and quality
- Match key fungicide timings to crop growth stage and risk periods
- Consider variety selection to reduce the incidence of disease and improve the performance of fungicide programmes
- Assess the integration of the different types of fungicides into fungicide programmes
- Build flexibility into fungicide programmes to account for in-season crop growth and disease pressure and the effects of application rate and timing upon yield
- Take an overview of fungicide development, future fungicide use and the impact of loss of active ingredients on future fungicide programmes
- Choose varieties to reduce the incidence of disease and improve the performance of fungicide programmes

Content:

Classroom module 1 (half day) – Management of OSR disease:

- Identification of the principal OSR diseases during plant development with particular emphasis on the impact of disease at the different stages upon yield and seed quality
- The types of fungicides available, their modes of action and how the timing of fungicide application controls the development of disease
- Designing fungicide programmes
- EU legislation and its possible effects on fungicide use
- An overview of future developments in OSR disease control

Trainers:

Nick Watson, Corporate Service Manager, NIAB TAG
